Max Abouchar

San Francisco, CA 94115 415.272.1107
maxabouchar@gmail.com https://github.com/SailingSF https://www.linkedin.com/in/maxabouchar

Mechanical Engineer turned AI Engineer who builds and deploys LLM agents and inference at scale. Two time founder and former satellite data product lead at Spire. Deep expertise in agent harnesses, and AI inference with founder resourcefulness and drive.
Personal site: goodatinvesting.com

Expertise in: LLM Inference, Product Management, API Design, Harness Engineering, Data Science, E-Commerce, Product Architecture, Data Visualization, Finance, User Research, MVPs, Technical Writing

AI & Data: PyTorch, TensorFlow, Scikit-learn, NumPy, Pandas, LangChain, model frameworks, vector storage

Backend: Python, Django, FastAPI, Flask, GraphQL, Postgres, Celery, Redis, TypeScript, Docker, Kubernetes

Signature Achievements

- Developed intelligent inference API across providers and models for reducing costs while increasing performance for thousands of users of the Anton Agent and Mindshub Cowork application
- Co-Founder, CTO, and builder of thinkr.pro, an AI assistant for e-commerce stores, 50+ users in 3 months, fully bootstrapped, with a 5 star rating in the app store and integrations into Shopify and many others
- Launched and led a satellite powered API for the maritime industry (Spire) with over $50M in ARR
- Personal blog analyzing finance for engineers (SpaceX valuation, Datacenters in Space, GPU Bonds)
- Solo builder of Alpha-Charter.com, AlphaCharter.xyz, AIArtArena.com, representing 100+ users

Professional History

MindsDB, *AI Engineer/Forward Deployed Engineer* 2025 – Present

AI Engineer and FDE leading MindsHub API development, agent evals, and enterprise customer implementation. FDE implementing the MindsDB business intelligence SQL agent and 'Cowork' agent platform for enterprise customers creating tools for demos and customizations for the sales team and implementation with customers.

- Lead API development for the MindsHub inference service and product providing cheap inference for users of MindsHub through custom models and routing using LLMs and Decision models.
- Delivered $1M+ in revenue by architecting SQL agents for enterprise BI across multi-cloud environments
- Decreased cost per task by 20% and enabled compatibility to all agent platforms by leading development of our LLM inference API serving millions of tokens/day across 20+ models with built in tools and model switching
- Integrated and built multi-modal eval engine to measure our 20% cost savings while preserving or improving output quality in order to increase understanding of AI agent performance internally and automate CI/CD
- Contribute to and build open source AI agent harnesses and coworking tools for work task completion

thinkr, *Co-Founder and CTO* – thinkr.pro 2024 – 2025

AI Agent e-commerce application to help run business using AI agents to review and monitor data, make recommendations, and automate interaction. Built a python Django backend serving a REST API. Using a Shopify App (TypeScript, Remix) in the App Store to enable read and write of data and operate in sync with our AI agents. Integrated with software like Facebook Ads and Klaviyo giving our agents wider context for our users' e-commerce business so that recommendations and chat are more informed.

- Created a Shopify App to give AI agents access to the API for business context saving managers 10+ hrs/wk
- Utilized multi-agent orchestration across providers with tool use for gathering data across all tools like Facebook Ads, Google Analytics, Klaviyo, etc. to give users a single web platform (React, Next.js) for interaction through our integrated backend API (Django) and their company-wide data
- Created scheduled agent system to manage tasks for e-commerce store alerting. Using celery tasks and a REST API we coordinated AI outputs with email APIs to notify of analysis leading to over 80% email engagement

- Hosted and deployed all software in free/very cheap platforms while bootstrapped across Heroku and AWS.

AlphaCharter, *Solo Founder* – AlphaCharter.xyz and Alpha-Charter.com 2023 – 2024

Built an AI-powered financial assistant designed for investment research and visualization. Users leverage LLMs to analyze and visualize financial data lowering barriers to entry. Transitioned to AI generated, interactive, newsletter.

- Integration with LLM APIs and tool use including vector storage to retrieve data, calculate metrics, return images, and up to date context aligned to user questions reducing cost to <$5/user/month
- Developed an AI agent using a custom multi-agent framework with a UI to compose newsletters and respond

Archimedes, *Lead Product Manager* 2023

Led the development and launch of a >$1M financial-data product aimed at protecting liquidity pool AMM deposits from loss and enhancing yield using Curve/Convex and Balancer/Aura.

- Implemented ML-driven safety factors from blockchain data pipelines to automate fund preservation

Cboe, *Product Manager* 2022 – 2023

Specializing in bringing digital-asset data to financial institutions for actionable trading. Special projects and research team on asset tokenization and AI training. Integrated 24/7 crypto market data into Cboe trading products and price feeds representing $100M+ of revenue in order to expand the offering to new markets.

- Prototype AI news product to automate stories for tickers and markets using data aggregation and API connectivity to internal and external news and data sources increasing trade volume by 10%
- Led presence with institutional crypto conferences and thought leadership through promotion of Cboe's regulated markets leading to strong uptake in price feeds by expanding the offering over 100%

Spire Global, San Francisco, CA 2019 – 2022

Technical Product Manager January 2021 – February 2022

TPM of Maritime data product suite. Managed roadmaps and MVP tests for product market fit in different verticals to serve digital transformation and data access across $80M+ product portfolio. Led engineering and data science projects for new features across satellites and data from AIS signal processing to logistics classification algos.

- Brought public GraphQL API with object recognition algorithm and AI data prediction to improve data scalability create more actionability using AI prediction and class recognition
- Led the space to cloud pipeline organizing data in LEO and post processing in our cloudto make it actionable
- Brought Spire's first analytics product to market by utilizing visualizations built on top of advanced analytics and predictive algorithms to drive revenue acceleration of ~$10M with 100% YoY growth.
- Thought leadership engagements with interviews by Wired, data inclusion in Bloomberg and Business Insider, Data Story Blogs, multiple webinars, speaking engagement at Google Cloud Summit.

Solution Engineer May 2019 – January 2021

Solution and Pre-Sales Engineer managing delivery and sales of space to cloud data pipeline and analytics product. Created and managed analytical product on top of data as well as grew US sales $1M (100% Growth). Engage customers to build solutions across all products and grow Net Renewal Rate to 130%.

- Built internal statistical analysis tools with Python, pandas, and visualization packages for customers/internal

PTC, San Francisco, CA ***Solution Engineer*** April 2017 – November 2018

Demonstrate and build customizations of PLM and IoT software to high tech customers leading IoT for west coast.

Education

Master of Business Administration, Entrepreneurship, *University of San Francisco, School of Management*, San Francisco, CA, May 2020, 4.0 GPA, 710 GMAT, Entrepreneurial Management, Quantitative Investing, Biz Strategy

Bachelor Of Science, Mechanical Engineering, *Southern Methodist University, Bobby B. Lyle School of Engineering*, Dallas, TX, 2016, President of Sailing Team, FSAE – Race car fabricator and driver

Interests and Hobbies: Quantitative Equity Portfolio Management Manage portfolios using personal quantitative algorithms and insights based on fundamentals and statistics. Visualize options strategies and pricing for hedging. **Competitive Offshore Sailing** Compete in offshore regattas on ocean racing sailboats as helmsman and trimmer. Also compete in inshore regattas as tactician and trimmer in J24s.
